Progress log

Brief: This section should include a description of the key milestones of the development process.

Overview: Are there **at least 5** progress logs recorded?

Note: This is **not** a week by week log. It specifically requires you to focus on the **milestones** themselves.

a. Do the progress logs contain **comprehensive detail of the development of the project** and **milestones** completed. Here is how I broke it down:

Detail: What was done - technical specifics

Outcome: What is now ready/possible

Hint! Again, ensure that you are 'guided' by the Requirements

Sample

Milestone 1:

Detail: Risk-scoring model designed and tested using threshold rules

Outcome: Tested rules-based model ready for Python implementation

Milestone 2:

Detail: Embedded system logged readings to CSV with placeholders [time period], [X] readings

Outcome: CSV dataset ready for model testing
